

LINE GRAPH 1

Line graph is used to represent two related pieces of data. There is a horizontal and a vertical line that intersects or meets. Observe the line movement of the line graph below. Then answer the following questions.

Questions

1. What is the average temperature of May?
2. How much cooler was March than October?
3. Which month's temperature dropped the most from the previous month?
4. Which was the second hottest month?
5. What is the difference in temperature between the hottest month and the second hottest month? Estimate your answer.
