

CONVERT KILOGRAMS TO GRAMS

Example:

1 kilogram = 1000 grams

3 kilograms = $3 \times 1000 = 3000$ grams

$3\frac{1}{2}$ kilograms = $3000 + (1000 \div 2) = 3000 + 500 = 3500$ grams

Note:

$\frac{1}{4}$ kilogram = $1000 \div 4 = 250$ grams

$\frac{3}{4}$ kilogram = $250 \times 3 = 750$ grams

Questions

1. QUESTION

Mr. Darcy bought fish in the market. He bought $2\frac{1}{2}$ kilograms from one vendor and $\frac{1}{4}$ kilogram of fish from another vendor. How much fish did he buy in grams? Type your answer in the space provided.
