

# ADDITION & SUBTRACTION

Exercise

## 1. QUESTION

Subtract the following fractions.

$$\frac{8}{9} - \frac{5}{9} =$$

$$\frac{11}{12} - \frac{6}{12} =$$

$$\frac{4}{8} - \frac{1}{8} =$$

$$\frac{13}{17} - \frac{7}{17} =$$

$$\frac{3}{4} - \frac{2}{4} =$$

$$\frac{8}{9} - \frac{3}{9} =$$

$$\frac{6}{7} - \frac{4}{7} =$$

$$\frac{3}{4} - \frac{2}{4} =$$

$$\frac{9}{12} - \frac{7}{12} =$$

## 2. QUESTION

Add the following fractions.

$$\frac{6}{7} + \frac{2}{7} =$$

$$\frac{1}{10} + \frac{4}{10} =$$

$$\frac{6}{10} + \frac{2}{10} =$$

$$\frac{4}{10} + \frac{3}{10} =$$

$$\frac{8}{9} + \frac{3}{9} =$$

$$\frac{6}{7} + \frac{5}{7} =$$

$$\frac{3}{5} + \frac{1}{5} =$$

$$\frac{7}{12} + \frac{9}{12} =$$

$$\frac{6}{8} + \frac{4}{8} =$$

#### 4. QUESTION

Calculate the following.

$$10\frac{1}{6} + \frac{4}{6} =$$

$$5\frac{6}{8} + 2\frac{5}{8} =$$

$$6\frac{2}{3} + 2\frac{1}{3} =$$

$$2\frac{10}{12} - 1\frac{5}{12} =$$

$$5\frac{2}{8} - 2\frac{5}{8} =$$

$$3\frac{2}{5} - 1\frac{3}{5} =$$

$$3\frac{1}{8} + 1\frac{2}{8} =$$

$$4\frac{1}{11} + 2\frac{2}{11} =$$

$$2\frac{5}{9} + 1\frac{8}{9} =$$

$$10\frac{7}{6} - \frac{2}{6} =$$

$$5\frac{3}{9} - 3\frac{4}{9} =$$

$$3\frac{6}{21} - 1\frac{7}{21} =$$

5. QUESTION

$$8 + \frac{1}{2} =$$

$$4 + \frac{3}{8} =$$

$$12 + \frac{1}{3} =$$

$$6 - \frac{1}{4} =$$

$$2 - \frac{2}{3} =$$

$$9 - \frac{5}{12} =$$

**6. QUESTION**

How much do you get when you subtract three-tenths from the shaded parts below.

Answer = \_\_\_\_\_

**7. QUESTION**

Use the number line below to help you find the sum of three-quarters and two-quarters. Type the answer below.

Answer = \_\_\_\_\_

6. QUESTION

Find the sum.

7. QUESTION

Which two when added makes eight-sixths?
