# TYPES OF QUADRILATERALS

Quadrilaterals are polygons with exactly four sides and four angles.

Practice

1. Which is not a polyhedron?

   ☐ prism

   ☐ pyramid

   ☐ cylinder

   ☐ cone

2. True or False

   A quadrilateral is a polygon with four equal angles?   True   False

   A rectangle is a quadrilateral that does not have 4 equal sides.   True   False

   A rhombus is a quadrilateral with four equal sides, four equal angles.   True   False

   In a rhombus, all sides are equal.   True   False

3. Which is NOT an example of a parallelogram?

   ☐ square   ☐ rhombus   ☐ pentagon   ☐ rectangle

4. A trapezoid or a trapezium has _____ pair of parallel sides.

5. Sum of angles in a quadrilateral is _____ °.

   ☐ 90   ☐ 180   ☐ 260   ☐ 360

6. All right angles are _____°.

   ☐ 90   ☐ 120   ☐ 180   ☐ 360

7. A square has a _____° angles.

   ☐ 60   ☐ 90   ☐ 180   ☐ 360
